

SHORTWAVE LOGS

(12/28/2004)

Black – Winter - Standard Time
Red – Summer – Daylight Savings Time
Blue – Year Round

Notes on these loggings:

S Meter readings given in a simplified format. S-1 through S-9 are standard S- Units. Above S-9 the number represents db above S-9. For example, S-10 is 10 db over S-9, while S-20 is 20 db over S-9. I have also added a subjective note when reception quality is higher or lower than the S reading might indicate, so you may see a reading like “S-9 Poor”, meaning S-9 on the meter but poor reception due to noise, interference or distortion, or “S-3 Good” meaning S-3 on the meter but sound is good in spite of it. The SINPO Code (Strength, Interference, Noise, Propagation Disturbance and Overall Merit) describes reception more precisely but is quite time-consuming when scanning for a project of this magnitude).

All reception logged just outside of Hartford, CT., USA., on the dates specified for each log entry. They are all identified to the best of my ability but I do not assume any responsibility for errors. If you don't see a recent date next to an entry it means that signal was not present during the most recent scans, and will be dropped if they do not reappear when the seasons change again. Entries without dates, such as Winter” or “Dec” are from Winter 2003 through Spring 2004.

Notice the Color Codes. Stations in red have only been logged during Daylight Savings Time (Summer). Entries in black are Standard Time (Winter) only. Entries in Blue have been logged in both seasons.

I have attempted to log only English language broadcasts, but have added some music broadcasts in other languages.

73,

Jay Allen
